EDUCATION

The University of Texas at Austin Bachelor of Science, Computer Science May 2028
GPA: 3.89 Major in Mathematics and Minor in Business

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Computer Architecture, Machine Learning, Object-Oriented Programming, Linear Algebra, Multivariable Calculus, Discrete Mathematics, Probability and Statistics

EXPERIENCE

Visa, *Software Engineer Intern* May 2026 - August 2026

- Reduced triage time **70%** by building system to autonomously detect and diagnose issues across **57M+** daily logs
- Grouped error logs into actionable categories via RAG embeddings in pgvector, condensing raw volume by **85%**
- Developed LLM-driven pipeline to classify error severity, triggering automated email alerts on critical spikes
- Designed root cause engine with LangGraph agents traversing Neo4j knowledge graph of codebases to suggest fixes

RealWork, *Software Engineer Intern* May 2025 - May 2026

- Condensed reporting workload by **40%** for **10,000+** businesses by building SEO dashboard with Flask and React
- Aggregated **52M+** keyword and visibility data points to deliver growth insights and improve platform performance
- Increased review conversion by **30%** through AI call bots designed with context injection and SMS follow-ups
- Engineered AI system that produced job summaries for each service area using job metadata to boost SEO performance

Soche Software, *Software Engineer Intern* January 2025 - May 2025

- Improved local discovery for **3,000+** users by developing mobile app features for events, happy hours, and live music
- Implemented RAG pipeline to process scraped event data and deliver more accurate, context-aware recommendations
- Enhanced usability and boosted engagement by redesigning UI with modern layouts and responsive components

CodeAssist, *Software Engineer* August 2024 - December 2024

- Built OpenAI-assisted system to automate evaluation of code quality and design with ReactJS, Flask, and PostgreSQL
- Decreased assessment time **50%** by optimizing evaluation workflows for **100+** student code submissions each semester
- Improved reliability and deployment speed by containerizing service with Docker and integrating CI/CD pipelines

PROJECTS

MyToyota | 1st Place Best Toyota Hack, HackTX October 2025

- Developed car recommendation platform that customizes vehicle matching based on financial and personal preferences
- Engineered RAG pipeline generating embeddings for user profiles and car data to produce relevant recommendations
- Integrated Gemini API and ElevenLabs for context-aware voice interactions reducing dealership call time by **15%**

Pintos | Operating Systems Kernel April 2026

- Engineered complete user program pipeline with argument passing, syscall handling, and process synchronization
- Built virtual memory subsystem with on-demand paging, frame table, swap, clock eviction, and stack growth detection
- Implemented full file system with extensible inodes, nested subdirectories, and buffer cache for optimized disk I/O

charmV5 | ARM Pipeline Emulator November 2025

- Developed full 5-stage ARM pipeline emulator in C covering fetch, decode, execute, memory, and writeback stages
- Designed hazard control, forwarding logic, and pipeline registers to handle data and control hazards across stages

SKILLS

Languages: Python, Java, C++, JavaScript, TypeScript, SQL, C, Go, Rust, Swift, R, HTML, CSS
Frameworks/Tools: React, Node.js, Express.js, Flask, FastAPI, Next.js, Docker, Git, AWS, GCP, TailwindCSS, Splunk
Databases: PostgreSQL, MySQL, MongoDB, Firebase, Supabase, pgvector, Neo4j
AI/ML: RAG pipelines, LangGraph, PyTorch, TensorFlow, OpenCV, Pandas, NumPy, scikit-learn
