EDUCATION

The University of Texas at Austin Bachelor of Science, Computer Science May 2028
GPA: 3.89 Minor in Statistics and Data Science

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Computer Architecture, Machine Learning, Object-Oriented Programming, Cloud Native Computing, Linear Algebra, Multivariable Calculus, Discrete Mathematics

EXPERIENCE

Visa, *Software Engineer Intern* May 2026 - August 2026

- Cut triage time **90%** by building system to autonomously detect and diagnose issues across **57M+** daily logs
- Condensed raw logs into **~2K** actionable error groups via embedding-based clustering and service field matching
- Designed **LangGraph** agent tracing live logs to root causes through **Neo4j** graph of **14** services and **5K+** nodes
- Delivered customizable severity-based alerting on EWMA baselines notifying live-site engineers of critical error spikes

RealWork, *Software Engineer Intern* May 2025 - May 2026

- Shortened widget load times **80%** with new backend using precomputed aggregate tables fed by **CDC** pipeline
- Boosted review request conversion **30%** by adding context-aware AI call bots to existing SMS and email flow
- Developed SEO dashboard with **Flask** and **React** aggregating **52M+** keyword data points for **10,000+** businesses

Soche Software, *Software Engineer Intern* January 2025 - May 2025

- Accelerated API response times **70%** by migrating unstructured app data to **Flask** backend with **Supabase** database
- Implemented RAG pipeline over **150+** weekly events to deliver personalized event recommendations for each user
- Shipped modern **Swift** UI from Figma designs, upgrading outdated app interface used by **3,000+** active mobile users

CodeAssist, *Software Engineer* August 2024 - December 2024

- Automated **~95%** of manual grading work with **OpenAI**-assisted evaluation of student code quality and design
- Deployed full-stack grading platform with **React**, **Flask**, and **PostgreSQL** supporting over **100** submissions per day
- Containerized services with **Docker** and automated builds through **CI/CD** pipelines for repeatable deployments

PROJECTS

MyToyota | 1st Place Best Toyota Hack, HackTX October 2025

- Created full-stack car recommendation platform with **React**, **TypeScript**, **Node.js**, **Express**, and **MongoDB**
- Architected RAG pipeline ranking top **5** cars for each user via **Gemini** embeddings and **4** weighted scoring factors
- Integrated **Vapi** voice API connecting prospective buyers to dealerships live with car details, cutting call time **20%**

Pintos | Operating Systems Kernel April 2026

- Built virtual memory subsystem with on-demand paging, frame table, swap, clock eviction, and stack growth detection
- Wrote persistent file system with extensible inodes, nested subdirectories, and buffer cache for faster disk I/O
- Engineered kernel-level user program support with argument passing, syscall handling, and process synchronization

charmV5 | ARM Pipeline Emulator November 2025

- Emulated five-stage ARM pipeline in **C**, modeling fetch, decode, execute, memory, and writeback with stage registers
- Resolved data and control hazards with forwarding and stall logic, keeping execution correct across pipeline stages

SKILLS

Languages: Python, Java, C++, JavaScript, TypeScript, SQL, C, Go, Rust, Swift, R, HTML, CSS
Frameworks/Tools: React, Node.js, Express.js, Flask, FastAPI, Next.js, Docker, Git, AWS, GCP, TailwindCSS, Splunk
Databases: PostgreSQL, MySQL, MongoDB, Firebase, Supabase, SQLite, pgvector, Neo4j
AI/ML: RAG pipelines, LangGraph, PyTorch, TensorFlow, OpenCV, Pandas, NumPy, scikit-learn
